

Windspill Deluxe Fixed™ Banner Hardware

Two #5520F Windspill Deluxe Fixed™ Single Brackets

#5520 Deluxe Fixed Single Bracket –The standard rod length of the Windspill™ Fixed Bracket will accept up to a 30½" wide banner (Kit #S1F). Also available for banner widths of 18", 24" and 36" .

1. The Bracket is designed so it may be strapped to a round, hexagonal, fluted or square pole (note the ¾" strapping guide channels at both ends). A 3/8" diameter lag bolt will pass through the adjustment slots for attachment to wood poles or wall surfaces.
2. The rod is "canted" in the arm casting so when mounted top and bottom with the "Banner" arrows pointing towards the banner, proper tension is placed on the outside edges of the banner. This creates a neat, even tautness to the entire surface of the banner. A loose outer edge not only looks "sloppy", but allows "wind whipping" of the fabric and premature failure of the banner.
3. The tie-down assembly allows the banner to be secured to the arm unit using zip ties or wire. The ties loop through the banner grommet and the hole in the tie-down assembly. This feature not only helps prevent the banner from working its way off the end of the rod, but safely secures the Bracket to the banner in the unlikely event that the Bracket were to come loose.
4. Reduction of light pole wind load is achieved through the combined use of the heat-treated aluminum castings and unidirectional fiberglass rods. In a high wind situation, the fiberglass rods will flex enough to "spill" the wind force off the banner and then return to their original position. Up to 25% reduction in light pole wind loads have been experienced because of this design feature.
5. Five year warranty.

**Windspill Deluxe Fixed™ Banner Hardware is intended as a high quality economy banner mounting system. It is designed for mounting banners with up to 15 square feet of surface area. Larger banners (up to 30" x 96") may be mounted on Windspill Deluxe Fixed for short periods of time with Quick-Release Clamps. Extended displays of the larger banners should be mounted with ¾" double wrapped stainless steel banding and buckles. If you are in a high wind area or change banners frequently, we recommend using the Windspill™ Deluxe Adjustable Banner Mounting System.
